live control software

let there be light

DMX Lighting Software

Create your own 3D stages, then import fixture positions into the controller. Select and program your lights using a screenshot of your 3D stage!

Control your fixtures with the Preset Manager. Thanks to the multiselection function, select fixtures with different presets and all common presets will be shown, allowing simultaneous control of diverse lighting fixtures.

Program your show following the «Cues/Sequences/Scenes» architecture. Run your show in LIVE mode and control your lights manually with the DMX input or with a MIDI controller.

## Main features

- Add your lighting fixtures in a few seconds thanks to the Patch Manager
- Download your shows into the interface memory. Trigger your sequences from the interface I/O ports and read the current sequence from the numeric display. This mode can work as a backup in case of a computer crash, or as a full controller in architectural applications
- **Effects Generator** : From a simple movement to a complex RGB effect as well as playing a video on an RGB matrix, creating advanced effects becomes child's play
- **Profile Editor** : Introducing a new format including the very latest features available on DMX devices, the new profile editor makes it possible to create your own devices quickly and easily
- **3D Visualizer** : Utilizing the latest 3D rendering technologies as well as the new fixture profile format, the new 3D visualizer offers unprecedented realism and quality
